

An invaluable Infection Prevention tool in the fight against pHAI's

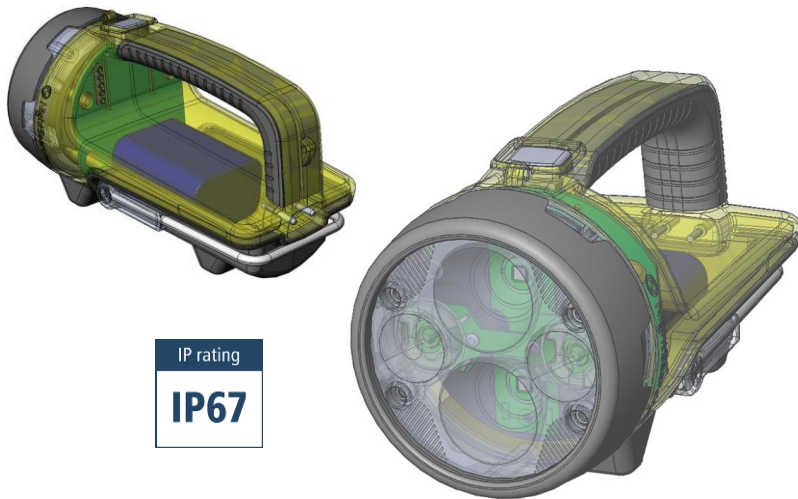

Bactiscan is an industry leading technology for preventative control, monitoring and microbial detection for healthcare, hospitality and pharmaceutical environments.

Handheld bacteria and biofilm detection system

Environmental cleaning is a fundamental principle of infection prevention and control (ICP) in healthcare settings. Maintaining a high level of environmental hygiene is critically important in reducing preventable HAI's and providing a safe patient environment.

IP rating
IP67

Independently Validated - Bactiscan™ has been independently validated by Campden BRI for detection of bacteria and biofilms within a laboratory and food industry setting.

An invaluable I.P. tool in the fight against pHAI's

Bactiscan's™ unique wave altering UV system, enables users to immediately identify and isolate biofilms, mold and bacteria such as *Salmonella montevideo* and *Pseudomonas aeruginosa*.
